

Wow it's been a while, but I'm back with a new series of YouTube videos. Hurray !!

This time it's all about Verdi and all the cool things it can do for you.

Since most of you guys already know it is the best debugger out there, my goal is to show you other aspects of Verdi, primarily Coverage and Verification Planinng.

If you don't know what I'm talking about - you should definitely check this video out.
